

# Accesorios CLIMAVER

## Perfiver L

Extruded aluminium profile, 1.155 m long. Designed for panel cuts for scarf joint folds. Approximate thickness: 1 mm. **CLIMAVER METAL SYSTEM DUCTS.** They are installed on the longitudinal edges of the ducts, ensuring that they can be cleaned and increasing their rigidity.

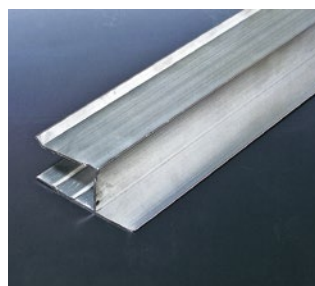

### Presentation

Pack of 80 profiles.  
1.155 m long profile.

## Perfiver H

Extruded, h-shaped aluminium profile, 2.00 m long. Approximate thickness: 1.1 mm. Specially designed for inspection doors or panels, connections to machine and/or grids or diffusers. Its use is therefore not exclusive to the **CLIMAVER METAL SYSTEM.**

### Presentation

Pack of 20 profiles.  
2 m long profile.

The **CLIMAVER** ducts are resistant to the most aggressive mechanical cleaning methods. For those cases where frequent cleaning of the ducts is required, Isover have designed the **CLIMAVER METAL SYSTEM.** This system can be applied to all the panels in the range: it consists of adding **PERFIVER L** aluminium profiles to the longitudinal edges of the ducts. Therefore, the longitudinal edges are protected. **PERFIVER H** profiles were designed in order to facilitate access and inspection, guaranteeing the watertightness and quality of the ducts.
